Derwin Ferrer, Product Manager, Phone: (619) 458-2128

The Column Early Warning Report For 4.50 With M/SQL 2.0 Versus 4.60 With M/SQL

The Column Early Warning Report lists M/SQL columns that were added, deleted, or *significantly* modified as indicated by a comparison of the M/SQL 2.0 map generated for the 4.50 and 4.60 releases of CHCS.

The Column Early Warning Report is intended to be used as a starting point for identifying changes which may have to be made to software accessing the CHCS database as a result of significant structural changes to the M/SQL map. Because the report only includes M/SQL columns that were added, deleted, or significantly modified, it should not be used as a baseline listing since there may be M/SQL columns that did not actually change between the two referenced releases.

The Column Early Warning Report considers an M/SQL column to have been *significantly* modified if it existed in both the 4.50 and 4.60 releases, and it experienced a change in its properties in terms of data type, data length, or acceptance of null values during data entry. If an M/SQL column changed between the 4.50 and 4.60 releases, but the change was not *significant* as defined above, the column will not be listed in the report.

In reviewing the Column Early Warning Report, M/SQL 1.0 sites that have not yet made the transition to M/SQL 2.0 should bear in mind that all table names cited in the report reflect the table naming algorithm used in M/SQL 2.0. The table naming algorithm used in M/SQL 2.0 is similar to that utilized in M/SQL 1.0; the major difference is that in the M/SQL 2.0 table naming algorithm, table names now have an indication of the associated FileMan file number appended at the end in which any decimal position in the FileMan file number is replaced by "x."

The following chart explains the columns comprising the report.

Column	Description
Table Name	The name of the M/SQL table
Column Name	The name of the M/SQL column
Action	The type of change that occured to the M/SQL table: *Added*, *Deleted*, or *Modified*
Data Length	The maximum length of data in the specifed M/SQL column
Data Type	The type of data in the specified M/SQL column
Nullable?	Indicates whether the specified M/SQL column can be null
